Choice for Institutions
It is important to emphasise that institutions will have choices, and that these choices should be supported by informed decisions. The potential models for adoption by institutions are described in the table below and institutions should consider how each of these models fits with their IT Strategy. Case studies, reports and advice are all available from the Middleware Assisted Take-Up Service (MATU).

1. Become a full member of the UK Access Management Federation, using community-supported tools

   **COSTS**
   
   Institutional effort to implement software, join Federation and enhance institutional directories

   **BENEFITS**
   
   Full institutional control, skilled staff and access management solution for internal, external and collaborative resources

2. Become a full member of the UK Access Management Federation, using tools with paid-for support

   **COSTS**
   
   Cost of support from supplier and institutional effort in liaison with supplier and Federation

   **BENEFITS**
   
   Full support in implementation and access management solution for internal, external and collaborative resources

3. Subscribe to an ‘outsourced Identity Provider’ to work through the Federation on your behalf, such as continued use of Athens with the gateways

   **COSTS**
   
   Subscription costs to external supplier (from July 2008) and internal administration role

   **BENEFITS**
   
   Minimum institutional effort to achieve access to external resources only

Connecting people to resources

Technical developments and the growing need for collaborative approaches in e-learning and e-research have led JISC to devote significant funds to the implementation of the next generation access management system based on Shibboleth technology. Benefits of the new system include easier access to online resources, enhanced opportunities for collaboration and greater control by institutions of access management procedures.

Central to these developments will be the creation of the UK Access Management Federation which is to be launched in September 2006. Educational institutions throughout the UK will be invited to join the UK Federation and adopt new technologies such as Shibboleth. This will provide institutions with a route to single sign-on to resources for users through the implementation of federated, devolved authentication.

The Athens service in its current form will not be funded by JISC after July 2008 and JISC has established a transition programme with clear choices to minimise disruption to end-users.

This article first appeared in JISC inform 13, Spring 2006

Connecting people and staff to resources subscribed to by educational institutions is essential to the sector. Nicole Harris looks at how the evolving needs of e-learning and e-research communities require some far-reaching changes to the ways in which institutions manage access to resources.
Joining the UK Access Management Federation

**INSTITUTIONAL JOIN-UP**
The introduction of Federated Access Management can shift the balance of responsibility for access management from library to IT services staff. Staff in libraries may need to work more closely with their IT colleagues to achieve this goal.

**OPTIONs**
Institutions will have choices and these choices should be supported by informed decisions. The potential models for adoption by institutions are given overleaf and institutions should consider how well each of the models fits with their IT strategies.

**ACTION: all institutions who wish to participate will need to join the UK Federation by registering and agreeing to observe Federation policy.**

**INSTITUTIONAL ROLL-OUT**
ACTION: on becoming a member of the Federation, an institution will need to roll out the new system. This may include staff training and development of new user guides and support mechanisms.

---

**1 Institutional Audit**

**CHOSE AND IMPLEMENT:** the fourth stage is to implement identity provider software. Institutions can currently choose between the Shibboleth, AthensM and Guanxi implementations.

**2 Directory Development**

**DEVELOP:** directories need to be correctly populated with attributes about students and staff that meet the Federation standard - known as the eduPerson.

**3 Authentication Development**

**CHOOSE AND IMPLEMENT:** an institutional authentication, or single sign-on, system should be selected. Institutions can choose from commercial or open source products.

**4 Implement IdP**

**REVIEW:** institutions should carry out an audit to review readiness to adopt federated access management. This would include making a choice between the three strategic JISC options, and alignment with institutional information strategy.

**5 Join Federation**

**ACTION:**
