TRANSPORT SCOTLAND ROAD SAFETY RESEARCH PROJECTS
2011-2012

Cycle Training in Primary Schools Research
Transport Scotland: published September 2011

This research involved developing eleven detailed case studies setting out the experience of planning, delivering and sustaining cycle training in primary schools across Scotland. This included an exploration of the barriers to delivering on-road cycle training, and how these have been overcome.

Planned Research for 2012-2013

Planned research includes:

1) A Transport Scotland/Economic and Social Research Council-funded PhD on in-car driver distraction at Nottingham University. This is due to begin in Summer 2012.

2) A review of the Guide to Improving School Transport Safety. This will be completed by Autumn 2012.

Other possible research includes:

3) Research into the Vehicle Forfeiture Scheme.

4) A segmentation study of road safety-related driver behaviour.
